This item is printed on demand - Print on Demand Neuware - Urazole derivatives are very important materials for their high reactivity in various kinds of chemical reactions. Among the wide range of applications of urazole, their applications as very reactive molecules in concerted reactions such as Diels-Alder, ENE and cycloaddition reactions, as well as unconcerted reactions, for example nucleophilic and addition reactions, can be pointed out. Triazolinediones are also used as oxidizing agents, for example, in conversion of ketones to 1,2-diketones, as well as oxidation of 1,3,5-trisubstituted pyrazolines under mild conditions and aromatization of 1,4-dihydropyridines. Urazole diamine can be a useful monomer for preparation of polyamides, polyesters and polyimides and it can also be used in resin and polymer production. Aromatic and aliphatic polyamides, polyimides and polyesters are well known as high performance engineering thermoplastics and have been widely used in various industries because of their good thermal stability, chemical resistance, and mechanical properties. Urazoles have been used as a laboratory reagent for preparation of novel organometallic and heterocyclic compounds. Urazole derivatives are hypolipidemic activity via 60 pp. Englisch.
